# Objective

To meet the broad area of oral health, Hazaribagh College of Dental Sciences & Hospital take major steps towards community health sector by providing free dental care for rural poor and urban slum dwellers, who lack the basic necessities to sustain a healthy and safe livelihood.

The objective of the camps are:

- To provide Free Oral Health care to the community.
- To spread awareness among people about the oral health.
- To give information on Oral health, and it's nurturing.
- To propose referral patients to the hospital for severe cases with discount offer.
- To provide free medicine to the patients.

# Data of Camps

---

Hazaribagh College of Dental Science and Hospital has come to field of dental science intensification by the empaneled faculty with help of people. This Jharkhand based institution help the beneficiaries with great care and support.

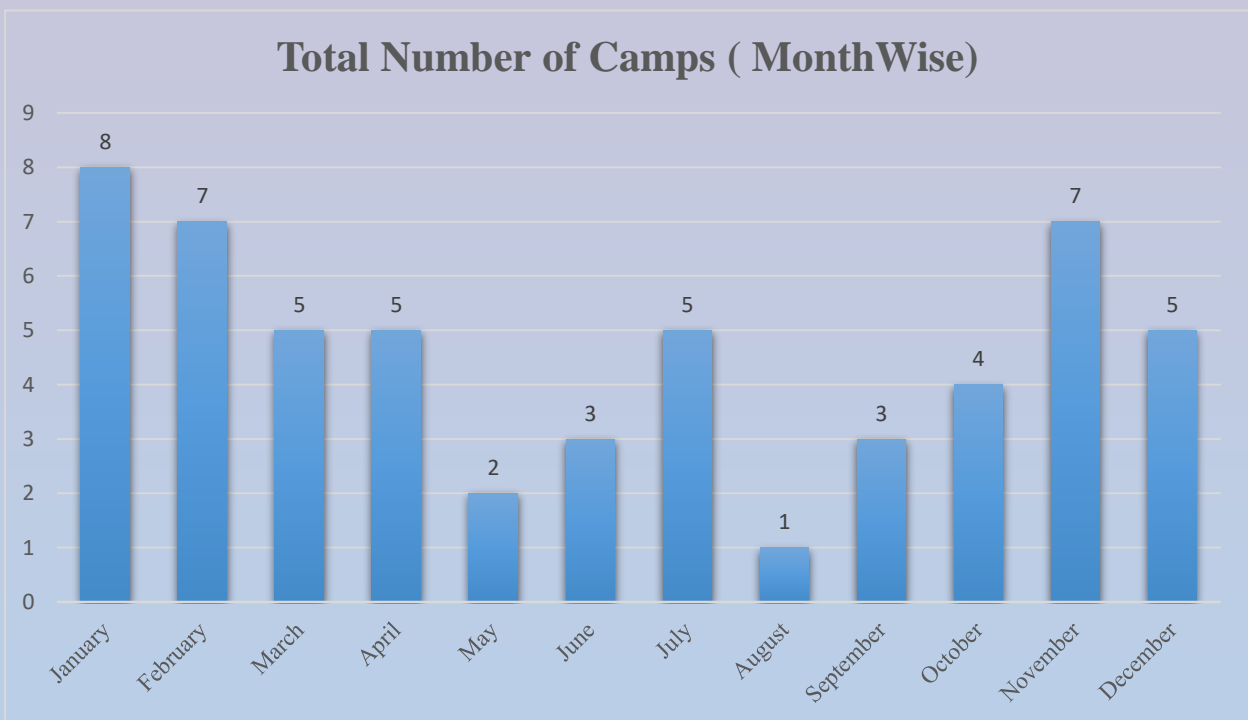

Total number of camps held for the year 2023 is fifty-five in fifty five different areas. Some areas are Badkagaon, Barkatta, kanchanpur, Charhi, Kabilasi, Bhelwara, Mandu, Chandal, Murhuru, Silwar. An many more.

Some institution gave their premises to conduct the camps i.e. Karnpura College, St. Stephen's School, Global India High School, Radha Govind University, Annanda College & Swami Dharambandhu College of Education.

The partners who helped to complete successful camps i.e. **National Thermal Power Corporation Limited (NTPC), BGR Mining Limited & Bharat Tibet Maitri Sangha.**

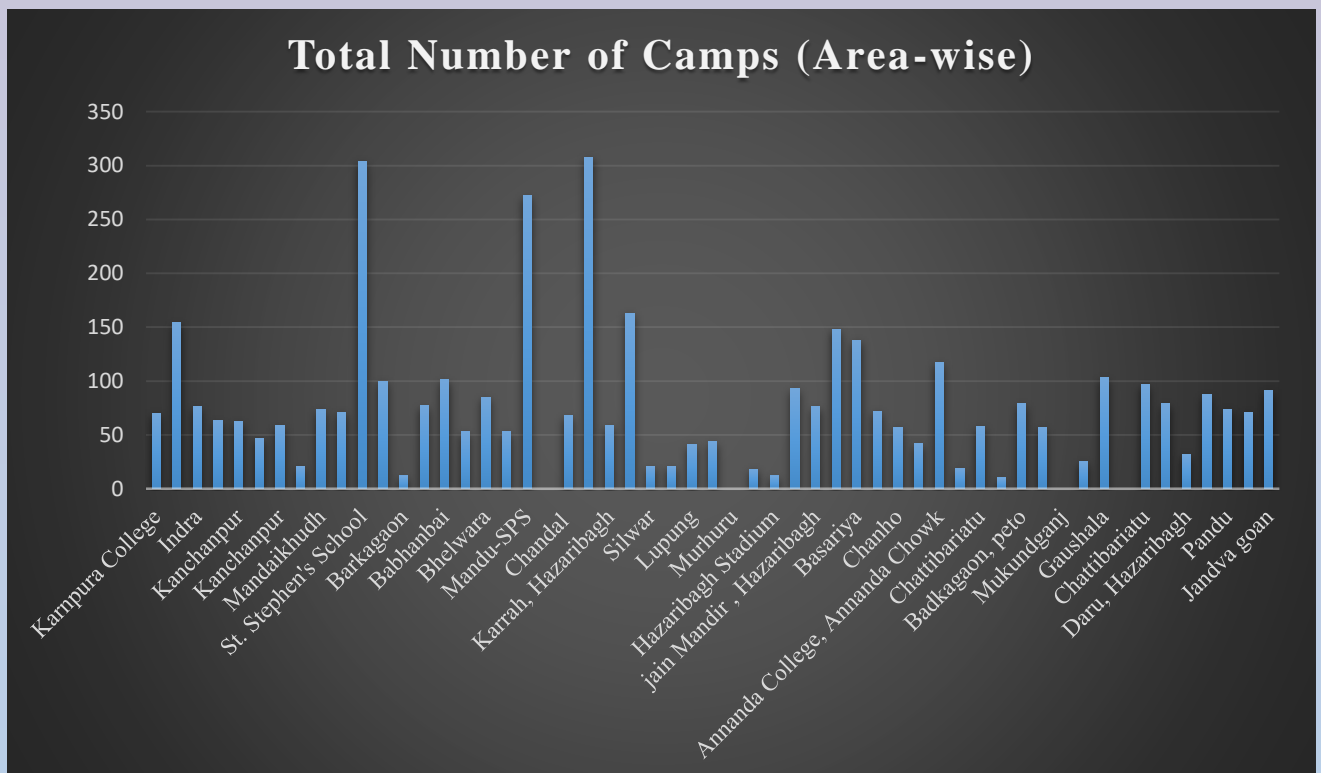

Out of **55**, four camps were related to awareness camp where assigned doctors spread awareness regarding oral health camps & total number of people was treated in these camps are **4133**.

# Data of Camps

Total number of camps was 55 in different time period of the year. It had been seen that through out the year camps were held. In January -8, February -7, March -5, April -5, May -2, June- 3, July- 5, August -1, September-3, October -4, November -7, December- 5 camps were took place for the year 2023. Hard work compassion of the participants doctors make the society prosperus and gave new liveliness for next one.

# Data of Camps

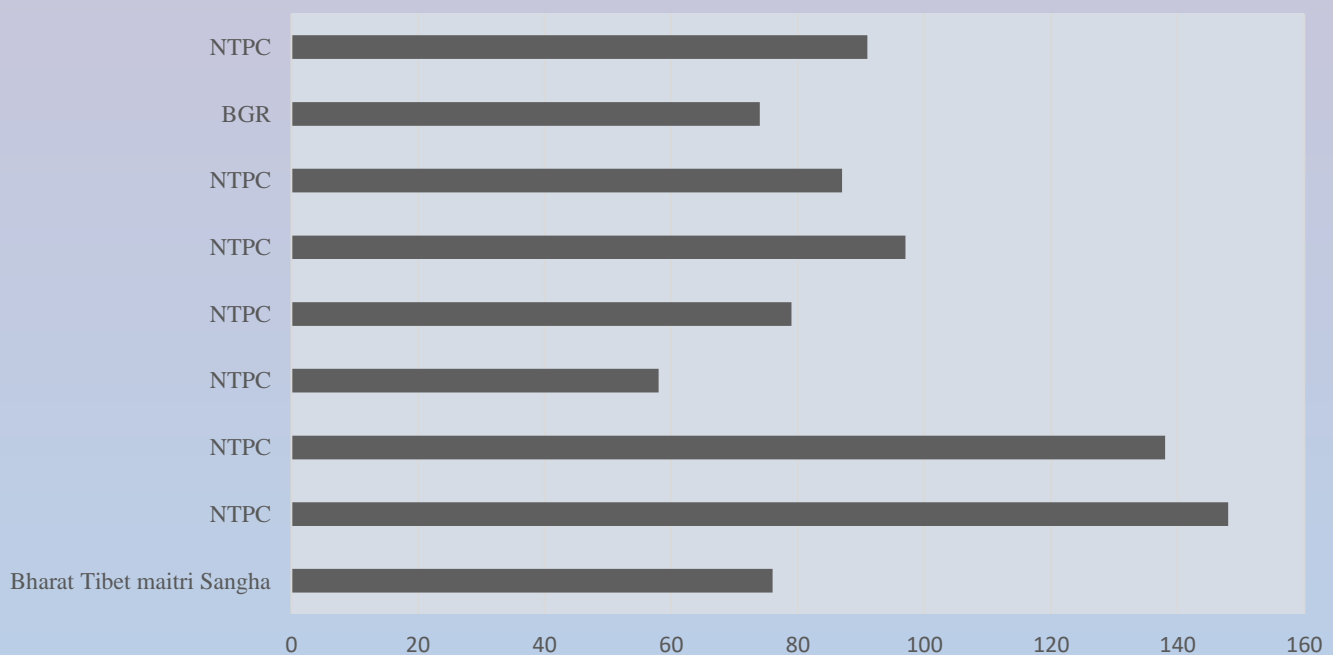

Different areas, different people, different experience but thing is common – The heartfelt work of Shrinivas Sarvamangalam Society.

Population in Hazaribagh, specially in Tribal areas oral health care has no access at all and many population does not seem serious for oral care. So as a foremost duty of the Hazaribagh College of Dental science and Hospital to make the population aware and help them by bringing under the umbrella of Oral Healthcare Mission initiated by Ministry of Health and Family Welfare. So the Society focused on the areas where people are not aware about this. Unprivileged people get their legit rights by the free camps.

# Data of Camps

## Camps with Collaboration

Shrinivas Sarvamangalam society work for community health care especially in Oral health. When hands are more then work became more efficient. So there are few camps held with the collaboration with some organization i.e. NTPC, BGR Mining Limited, Bharat Tibet Maitri Sangha.

Number of total camps:

NTPC (Pandu, Basariya, Badkagaon, Peto, Chattibariatu, Jandva Goan)-601

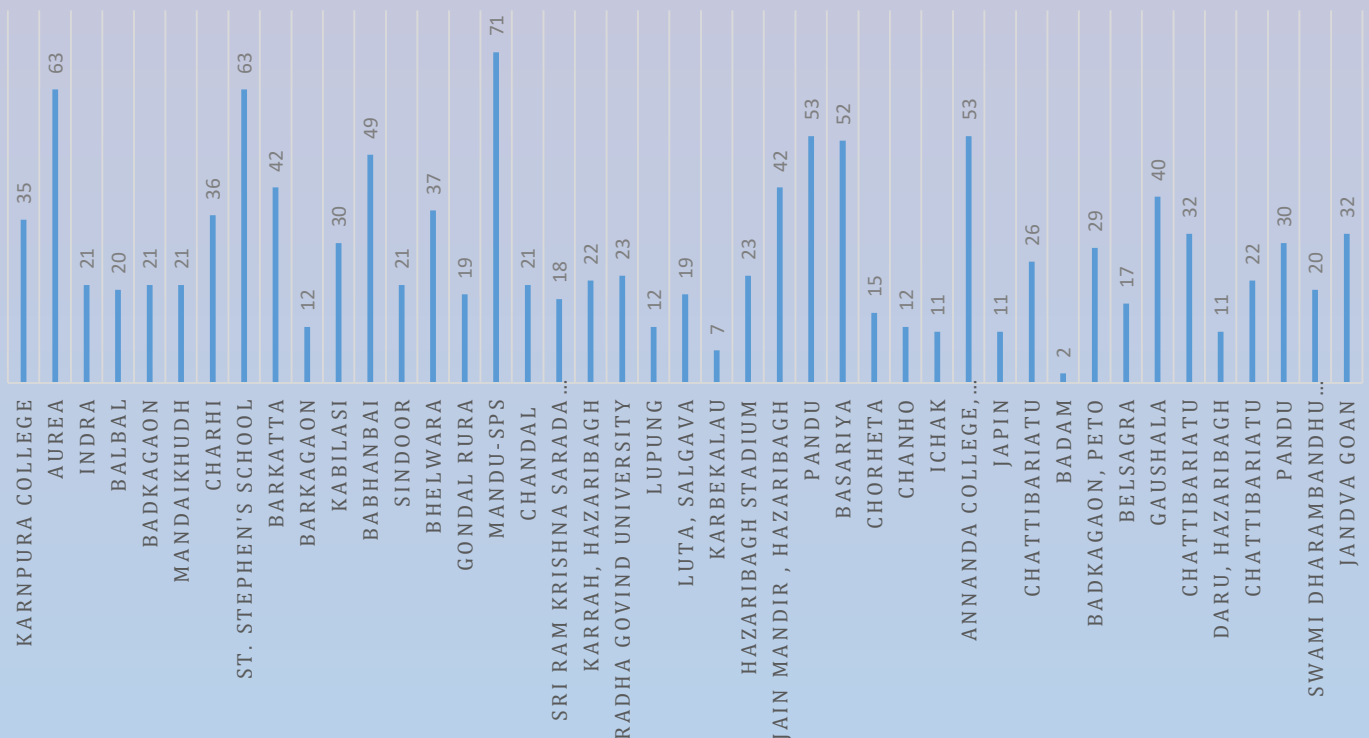

BGR Mining Limited (Pandu)-74

Bharat Tibet Maitri Sangha(Jain Mandir , Hazaribagh)- 76

# Data of Camps

## REFERRED PATIENTS FOR SEVERE CASES

Health camp is one of the most curative and effective way to know about severity of a case, so Hazaribagh College of Dental Science & Hospital provide the facilities of referral cases for the patients. So that they can avail the benefits. The adding advantage is for the people that they can take treatment with 50-70% discount. It aids the unprivileged people to get proper coverage. Total 1216 unprivileged patients are treated under this referral case.

# Services at Camps

## Dental Caries

- Very Common – More than 10 Million cases per year (India)
- Permanently Damaged areas in teeth that develop into tiny holes.
- Causes include bacteria, snacking, sipping sugary, and poor teeth cleaning.

## Gingivitis

- Very Common – More than 1 Million cases per year (India)
- Gum Disease that causes inflamed gums
- Cause is poor oral hygiene. Untreated gingivitis can lead to tooth loss and other serious condition.

## Root Stumps

- Root Stump is the remaining portion of a tooth's root that's left in the socket after the crown has fallen off.
- Root stumps can be a source of infection and may cause an abscess if left untreated.

# Services at Camps

---

## Fluorosis

- Very Common – More than 15 Million cases per year (India)
- A condition that results in white or brown speckles on teeth
- It's caused by overexposure to fluoride in the early years of life, when permanent teeth are developing.

## Periodontitis

- Very Common – More than 10 Million cases per year (India)
- Serious gum infection that damages gums and can destroy the jawbone.
- Causes include poor oral hygiene. It is a risk factor for heart and lung diseases.

## Retained Deciduous

- Over-retention of deciduous teeth.
- A dental anomaly in which one or more primary teeth persist beyond their expected exfoliation.
- This condition hinders the proper eruption of permanent teeth and can alter their eruption path.

# Services at Camps

## Wasting Diseases

- Any gradual loss of tooth substance characterized by the formation of smooth, polished surfaces.
- The forms of wasting are: erosion, Abrasion, attrition, & Abfraction
- Caused by prions, which are misfolded proteins that disrupt the nervous system

## Apical Periodontitis

- The local inflammation of the periapical tissues that originate from pulp diseases.
- Occur due to the advancement of dental caries, trauma, or operative dental procedures.

## Chronic generalised Gingivitis

- Very Common – More than 1 Million cases per year (India)
- Abnormal alignment of the upper and lower teeth.
- Happens due to childhood habits or jaw is too small compared with the size of the teeth.

# Services at Camps

## Partially Edentulous

- cases where some, but not all teeth are lost, resulting in an incomplete dentition.
- Oral infections such as gingivitis and dental caries (cavities) cause edentulous. Other common causes are bone loss and poor oral hygiene. These diseases destroy the gums and bones that hold teeth in place, causing teeth to fall out.

## *Centre of the Incisive Papilla (CIP)*

- Used as an anatomic landmark for anterior teeth
- Prepare s individuals to provide patients care, take dental radiographs.

(Data Source: MoHFW, NOHP)

"For anything worth having one must pay the price; and the price is always work, patience, love, self-sacrifice - no paper currency, no promises to pay, but the gold of real service."

- John Burroughs

# Words from our Doctors

---

*Dr Nishad Gawali*

*"Department of public health dentistry, Hazaribagh College of dental sciences, We Dr Nishad Gawali and Dr Somya Raj conduct dental screening and treatment camps frequently for the purpose of general oral health care and awareness among the rural population of Hazaribagh. The experience we have is that people are lacking oral health awareness and basic oral health care. We are truly determined and enthusiastic with primary motivation to make every oral cavity healthy. The dental camps give us an opportunity to explore different places and communities, making us more knowledgeable. Considering the future aspect we will be working towards the benefit of all the communities not only in Hazaribagh but maximum places in the place of Jharkhand"*

*Dr Somya Raj*

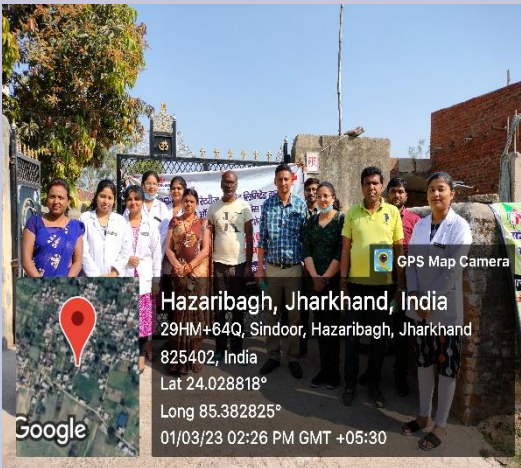

# Conclusion

---

Dental camps are vital outreach initiatives that provide oral health care services directly to underserved populations. These temporary clinics play a crucial role in improving community health by offering free or low-cost dental services, education, and preventive care. The importance of dental camps lies in their accessibility, early detection, education, and community engagement. Organizing a dental camp requires careful planning and execution, including location selection, partnerships with local dental associations, ensuring adequate equipment and supplies, recruiting volunteer dentists, hygienists, and support staff, adhering to strict infection control protocols and safety standards, and establishing a system for referrals and follow-up care. Dental camps have shown significant positive impacts on oral health, including improved oral health outcomes, increased awareness about proper oral care practices, data collection on community oral health needs, and professional development for dental professionals. However, organizers should be aware of potential challenges such as limited resources, continuity of care, and cultural sensitivity. In conclusion, dental camps serve as vital tools in promoting oral health and reducing disparities in dental care access. By bringing essential services directly to communities, these initiatives address immediate dental needs but also foster long-term improvements in oral health awareness and practices. As the dental profession continues to emphasize preventive care and community outreach, dental camps will remain an important strategy in the broader effort to improve public health.
